Development Services

- DaaS

DevOps is a set of practices designed to break down the barriers,

combining the development team with the operations team to reach maximum collaborative capacity, all this is done by automating workflows and infrastructure, continuously measuring app functioning and quality.

Before DevOps, operators, and developers had quite a contention. Developers used to pass their code to operators,

and they were responsible for keeping it running. Operators didn't have enough knowledge of codebases, and developers didn't have enough knowledge of operational practices.

Providing a greater collaboration of developers, operators, and other parts of the organization.

ITS

Managed Services

A mature model that brings technology services up to the next level of Operations SLA (Service Level Agreements) Commitment.
